

**WILSON•HURD®****DOMED NAMEPLATES**

**A** clear resin was poured over the nameplate featured here in order to provide a three dimensional or “domed” effect.

The doming resin can be applied to either aluminum, polycarbonate, and polyester material - offering a quality look to a basic part.

Not only will this process provide a distinctive look, it also offers resistance from scratching since the graphic is embedded behind the resin.

Parts designed for doming should be a minimum of 4 mm (.156") wide, with radius corners of at least 1.57mm (.062").

It is important to note that certain colors (especially shades of red) are susceptible to “blushing” and may appear slightly different on labels and nameplates after they have been domed.

Ideal applications include:

- Appliances
- Electronics
- Medical Equipment
- Sporting Goods

*Domed Nameplate*

- Recreational Equipment
- Industrial Equipment
- Marine
- Automotive
- Indoor and Outdoor Applications
- POP Displays
- Cosmetic Packaging Components
