

WILSON•HURD®**ELECTRIC MOTOR KEYPAD ASSEMBLY**

The custom keypad assembly featured here was designed to offer increased functionality and operator control.

By incorporating additional keys, a larger multi-line display with selectable text size, and directional arrows, this keypad assembly features improved navigation and simpler means to programming.

Since this unit operates in an environment where moisture is present, it was crucial that the final product be waterproof and meet UL washdown and spraydown standards. Our engineering staff worked closely with our customer to design a product that would meet these stringent environmental conditions.

Wilson-Hurd supplies the entire keypad assembly featured above. All final assembly is done in-house, thereby eliminating our customers' need to work with multiple suppliers.

Project Details

- Four (4) embedded LEDs
- Membrane switch with fourteen (14) tactile

Engineered Solution - Electric Motor Keypad Assembly

keys

- Colors: Black, White, Yellow, Silver and Red
- LCD Display
- Textured enclosure
- Unit sealed to NEMA 4X standards
- Perform programming of the microprocessor
- Conduct 100% final testing
