

WILSON•HURD®**OIL/GAS PIPELINE**

Our customers original panel utilized commercially sealed mechanical switches, making it difficult to clean and unreliable in harsh environments. Due to these factors, the panel could not be CE approved by one of the European approval agencies, restricting the company's ability to increase its European business.

The company wanted to update the panel giving it more functionality and aesthetic appeal. Wilson-Hurd's Engineers designed a durable, functional and reliable panel to withstand the harsh operating environment.

The New Panel Contains:

- Etched and filled stainless steel overlay and keys
- Eight (8) LEDs filled and sealed

Stainless Steel Panel

- Four (4) standoffs assembled to back panel for use in mounting LCD display.
- Keys are .619" x .619" and extend .127" above panel.
- Except for the LCD display - part was completely assembled by Wilson-Hurd.
