

ENGINEERED

SOLUTIONS

WILSON-HURD®

When you are faced with a challenging electronic control application, seek Wilson-Hurd's guidance for developing the ultimate custom switch package. Our experienced team of engineers will review your specifications and recommend the appropriate design option for you — including switch technology, overlay material, back panel construction, and type of adhesive.

Challenges are what our engineering staff excels at – even those applications that require incorporating existing components into the newly designed control product. We review various options in order to propose a solution that will be the most economical and yet provide you with a superior performing electronic control product.

Various electronic components may be integrated within your custom designed switch package such as toggle switches, LED displays, microprocessors, embedded controllers, encoders, and many more. Depending on your application, we may propose to incorporate additional design options, including shielding, relays, power supplies, sensors, fans, or complete enclosures.

When you partner with Wilson-Hurd®, you receive a complete turnkey manufacturing service. We provide all circuitry and wiring, and as a final step we test the completed assembly of your switching control to assure you will receive a product that performs to your requirements.

Put our talented team of engineers to the test...let our innovative staff create a custom engineered solution for you!
